# Context and Problem

- **Industrial Context:** Hydraulic systems are the backbone of manufacturing and aerospace.

# Context and Problem

- **Industrial Context:** Hydraulic systems are the backbone of manufacturing and aerospace.
- **The Cost of Failure:** Unplanned downtime costs between \$50,000 and \$500,000 per hour.

# Context and Problem

- **Industrial Context:** Hydraulic systems are the backbone of manufacturing and aerospace.
- **The Cost of Failure:** Unplanned downtime costs between \$50,000 and \$500,000 per hour.
- **Safety Risks:** Catastrophic failures pose serious hazards to workers.

# Context and Problem

- **Industrial Context:** Hydraulic systems are the backbone of manufacturing and aerospace.
- **The Cost of Failure:** Unplanned downtime costs between \$50,000 and \$500,000 per hour.
- **Safety Risks:** Catastrophic failures pose serious hazards to workers.
- **Goal:** Transition to **Predictive Maintenance**.

# Kubernetes Networking Challenges

- **Kafka Advertised Listeners:**
  - Pods have dynamic IPs
  - Fixed using StatefulSet + Downward API
